

Sackville Street, London

THE CHALLENGE

This space for a leading property management company required stripping right back and completely refurbishing. As prime real estate and its location meant this had to be rapidly completed to tight timescales and high end specification to ensure it was back up and operational in the minimum amount of time.

THE NEXT STEPS

The project was led by BW – the workplace experts and involved several aspects which needed to be tightly weaved together. Moyne’s role was to conduct an electrical design survey, create a fitting programme and the installation.

THE OUTCOME

From a blank space a number of environments were created including power desks. The location required a Cat A installation of power, lighting, lighting control, data, security access control and fire. The final result was a versatile work space finished to an extremely high end specification.

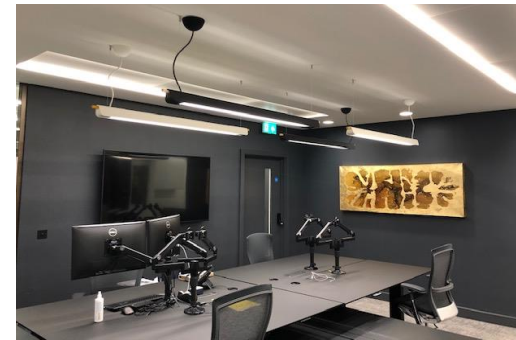

PROJECT SCOPE

BUDGET: £300k

CONTRACT TIME:
12 weeks

REQUIREMENTS: Power, lighting, lighting control, data, security access control and fire.

“Here at BW we have worked with Moyne on many projects now. So it is really great when they are involved as they know our expectations, work well with our teams, keep us informed and ultimately just get on with the job and deliver.”

Tim O’Brien, Project Manager at BW
