

Premier League, Paddington

THE CHALLENGE

A complete refurbishment of a luxury space, taking an already extremely high standard Cat A / B fit-out to create a full Cat B fit-out. From a visual perspective it was essential for this to reflect a slick industrial design style with a number of complicated interior design lighting requirements.

THE NEXT STEPS

Working closely with Parkeray, the Moyne team were heavily involved from the outset. This involved several aspects including completing an electrical design survey, create a fitting programme and then moving onto the actual installation.

THE OUTCOME

All high-level services were installed exposed to achieve the client's very high end requirements for an industrial design style. A UPS integral system combined with the communications was installed with containment and cable management systems provided to all other services.

PROJECT SCOPE

BUDGET: £670k

CONTRACT TIME:
20 weeks

REQUIREMENTS: Power, lighting, lighting control, UPS, containment and cable management systems.

"With this project being a prestigious client in a central London location, we were keen to work with Moyne on the electrical installation side of things. We know the team works well with ours and that they deliver to the high standards we expect. Plus with this project having all the functional facilities on show it had to be absolutely spot on and true to form the site looks amazing."

Chris Marshall, Senior Project Manager at Parkeray
